FORGED WHEELS

After years of research and development of the ultimate wheel product, Rennen Forged launched the world's most technologically advanced forged wheel manufacturing facility. Located in the heart of Los Angeles, Rennen Forged targets the Mecca of the wheel industry with innovative new designs, engineering and technology. Through our in house design team, structural engineering, CNC programming, CNC mill and lathe capabilities and multi-piece wheel assembly, we bring your wheel designs to life. We currently offer 1PC, 2PC, and 3PC concave wheel manufacturing with a series of limitless design capabilities. With full in-house forged wheel manufacturing abilities, Rennen Forged can handle ANY custom wheel order big or small. We also offer off shore wheel manufacturing for mass-production and large-scale wheel orders. Our experienced staff will guide you through every step of your order to ensure no detail is ever overlooked. Through our years of experience, Rennen Forged has attained the highest levels of performance, quality and styling. It is also through these accolades, that we have attained the position of trusted manufacturer for several of the other leaders in the private label wheel industry. We pride ourselves on making sure to deliver nothing but the best when it comes to customer satisfaction.

Every Forged wheel begins with a 6061 grade A aluminum billet, cut and put into a 10,000 ton Forging Press to forge the center disks or 1PC Forged wheel. The result of the forging process is 6061 aluminum material with a completely refined grain structure. This new grain structure allows the wheel to be both lightweight and extremely durable. Beginning with a high quality material results in a high quality product, hence we use the same materials used and trusted by aerospace manufacturers and technicians. We assure the highest level of tolerance and quality control possible.
